Information such as browsing history, cache, and cookies are saved on your computer while you surf the Web. They are used in various ways to improve your browsing experience. These private data components, while resulting in conveniences such as faster load times and auto-populated fields, can be used by nefarious actors. Whether it be the password for your email account or your credit card number and address, much of the data left behind at the end of your browsing session could be dangerous in the wrong hands. In order to protect yourself, it is recommended you delete these artifacts on a regular basis.
