

VINE

Adjusting your settings

There are many settings you can change on Vine. To access your settings, go to your **Profile** and tap **Settings**. From here, you can change general settings, such as your account password. You'll also find more specific privacy settings, which we'll discuss in more detail below.

Privacy settings

By default, the videos you share on Vine are completely **public**. This means anyone can access the videos you share, even people who don't have an account on Vine. If you're uncomfortable with the idea of people you don't know viewing your videos, you can **protect your posts**. This way, only people you approve will be able to see your stuff. To do this, go to your **Settings** → **Your content** → **Posts are private**.
